Fog Potential (DPD Min °C) Forecast Day 1

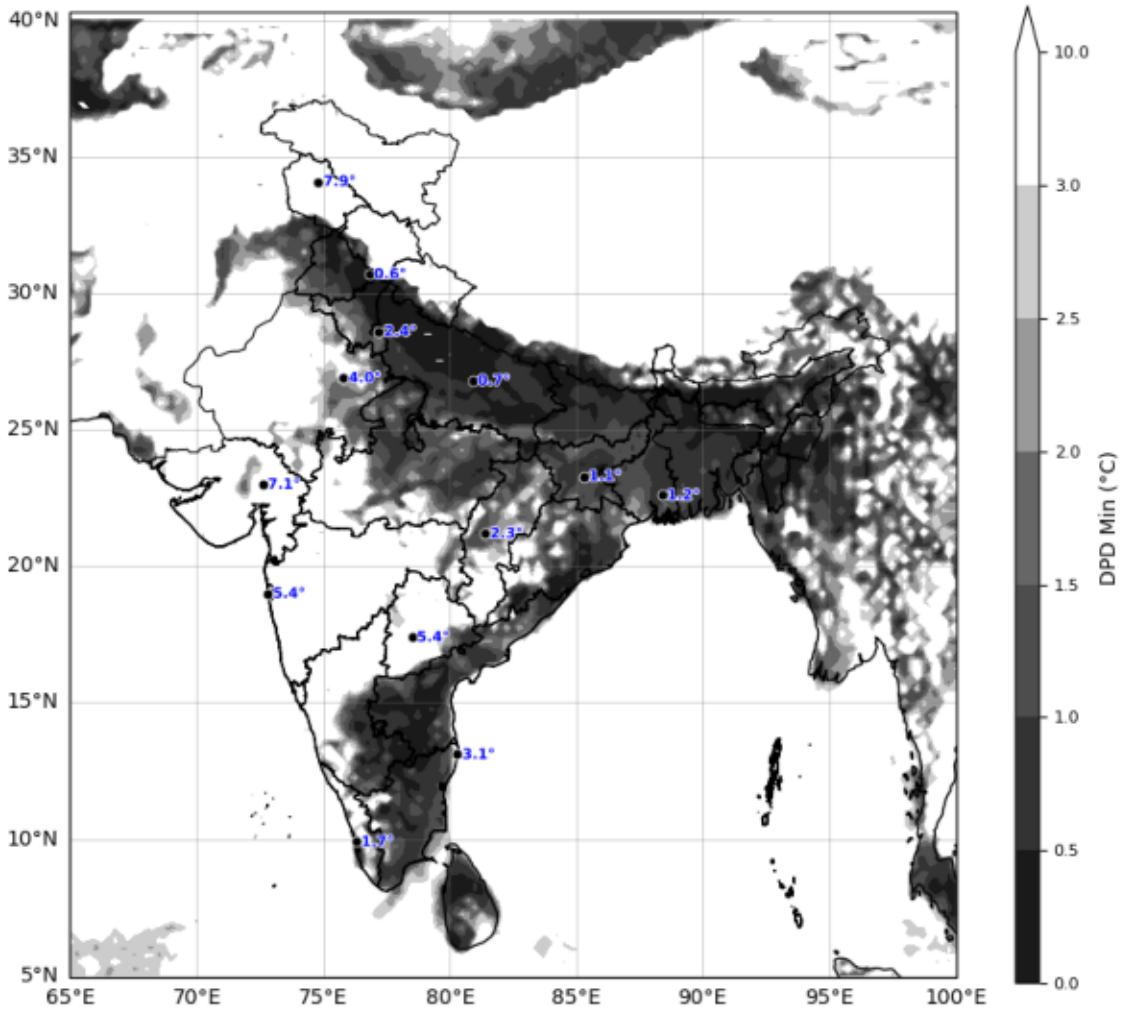
India Region

ECMWF Run 25 Dec 2025 12z

Valid for 26 Dec 2025 00z (morning)

KOLA - India by gujaratweather.com - Data: ECMWF

KOLA: Kathiawar Ocean & Land Atmosphere – Experimental Weather Mapping Platform



Notes about the product:
DPD (Dew Point Depression) is the difference between air temperature and dew point.
Fog is more likely when DPD < 3.0°C. Lower values indicate heavier fog potential.
Higher DPD means lower fog risk. Rainfall areas may show false positives due to humidity.
Use this map with awareness of these factors and local weather context.

Fog Potential (DPD Min °C) Forecast Day 2

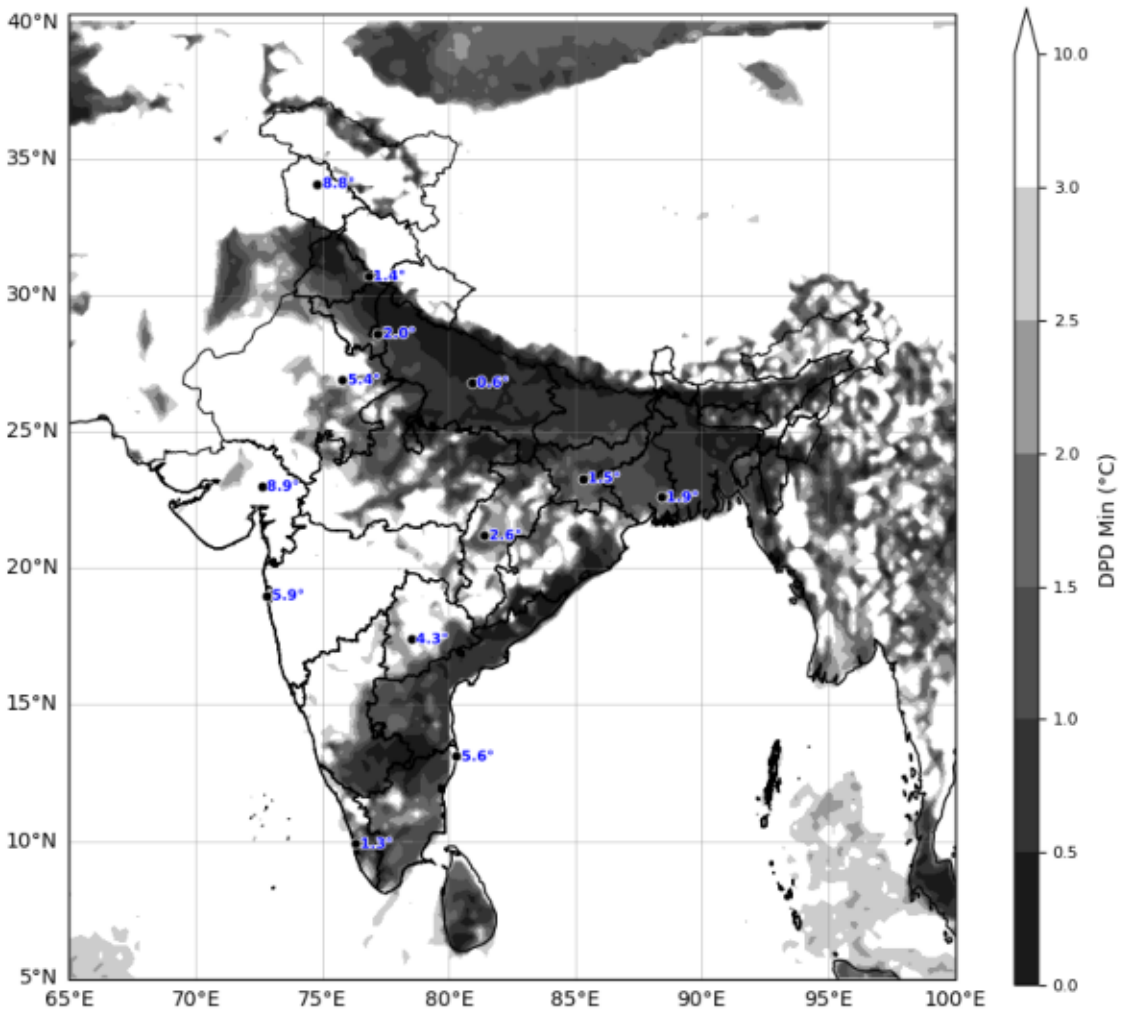
India Region

ECMWF Run 25 Dec 2025 12z

Valid for 27 Dec 2025 00z (morning)

KOLA - India by gujaratweather.com - Data: ECMWF

KOLA: Kathiawar Ocean & Land Atmosphere – Experimental Weather Mapping Platform



Notes about the product:
DPD (Dew Point Depression) is the difference between air temperature and dew point.
Fog is more likely when DPD < 3.0°C. Lower values indicate heavier fog potential.
Higher DPD means lower fog risk. Rainfall areas may show false positives due to humidity.
Use this map with awareness of these factors and local weather context.

Fog Potential (DPD Min °C) Forecast Day 3

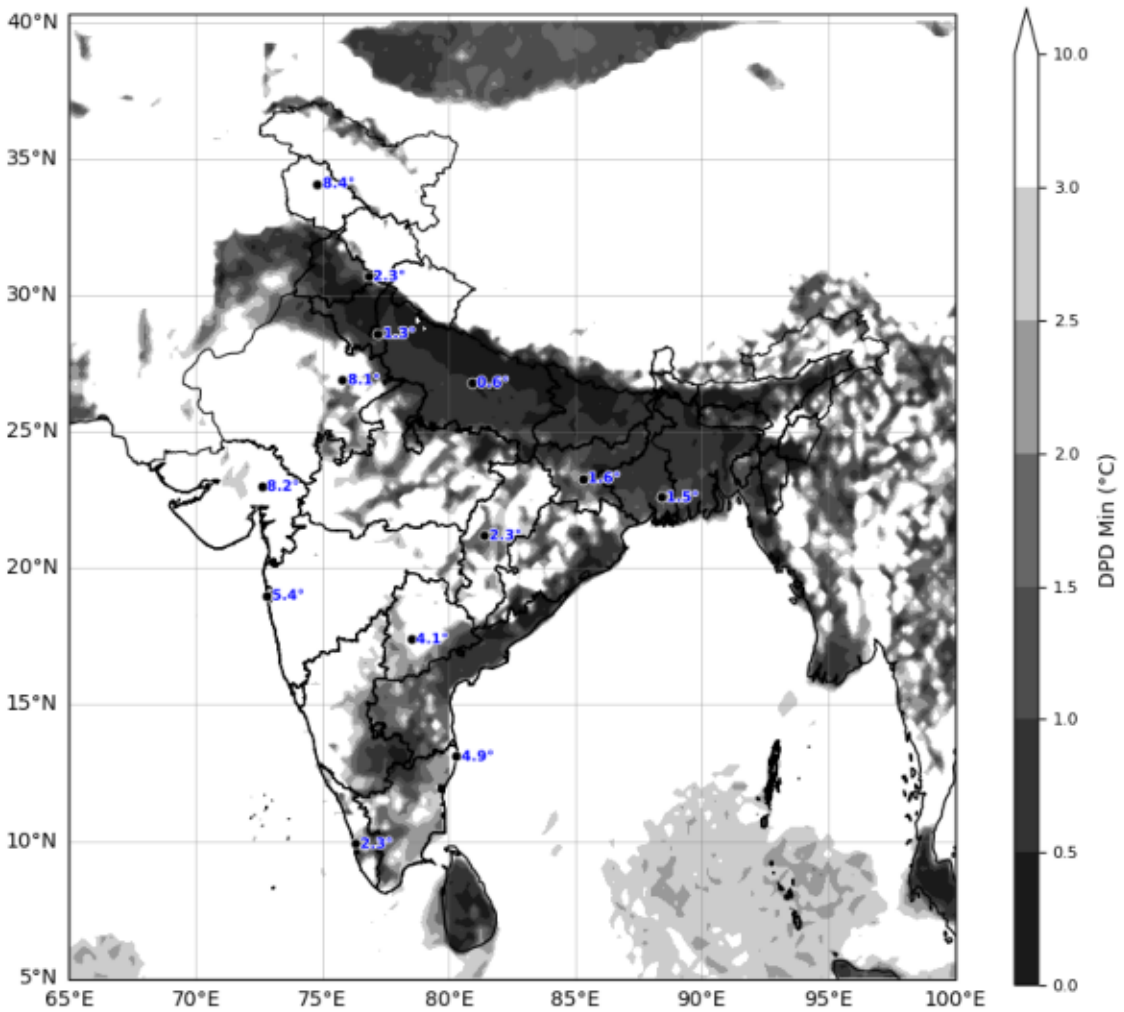
India Region

ECMWF Run 25 Dec 2025 12z

Valid for 28 Dec 2025 00z (morning)

KOLA - India by gujaratweather.com - Data: ECMWF

KOLA: Kathiawar Ocean & Land Atmosphere – Experimental Weather Mapping Platform



Notes about the product:
DPD (Dew Point Depression) is the difference between air temperature and dew point.
Fog is more likely when DPD < 3.0°C. Lower values indicate heavier fog potential.
Higher DPD means lower fog risk. Rainfall areas may show false positives due to humidity.
Use this map with awareness of these factors and local weather context.

Fog Potential (DPD Min °C) Forecast Day 4

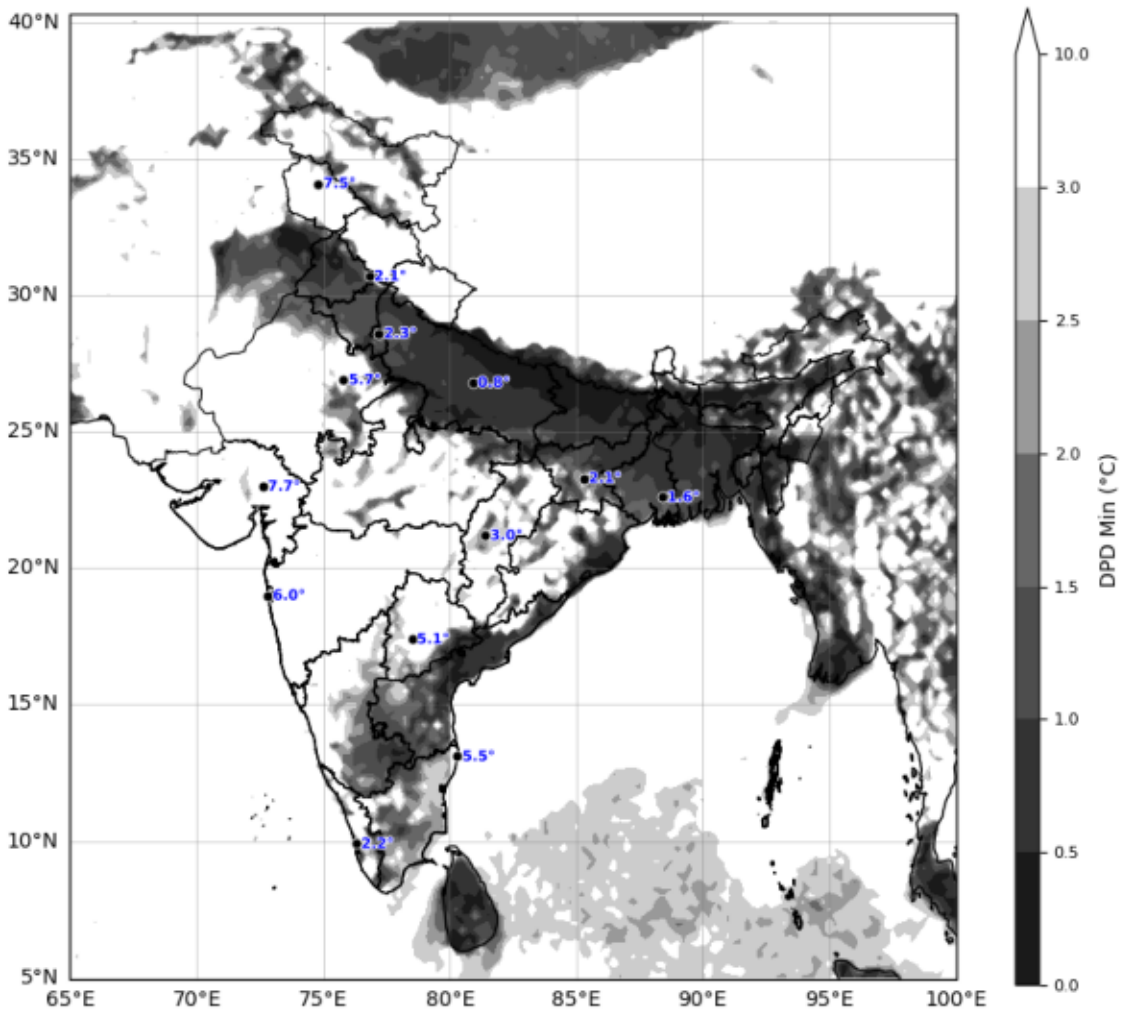
India Region

ECMWF Run 25 Dec 2025 12z

Valid for 29 Dec 2025 00z (morning)

KOLA - India by gujaratweather.com - Data: ECMWF

KOLA: Kathiawar Ocean & Land Atmosphere – Experimental Weather Mapping Platform



Notes about the product:
DPD (Dew Point Depression) is the difference between air temperature and dew point.
Fog is more likely when DPD < 3.0°C. Lower values indicate heavier fog potential.
Higher DPD means lower fog risk. Rainfall areas may show false positives due to humidity.
